

## Trimax Structural Lumber

Trimax designs and manufactures high-quality plastic lumber products for a variety of residential, commercial and municipal applications. Trimax is made from patented blends of virgin and recycled pre-consumer/post-consumer high density polyethylene (HDPE) – the type found in a number of everyday recyclable products and a structural strengthener is added. The extreme durability and chemical inertness of this material make Trimax the finest quality and the healthiest known alternative to all wood products.

Trimax Structural Lumber is ideal for many structural applications, such as joists, posts, girders, bulkheads and pilings. Trimax is not only versatile but also far more durable than wood. It won't rot, splinter or decay and never needs painting. It's also free of the harsh chemicals found in pressure-treated lumber.
